

What can't be stored under the sink?

Any product that is inherently 'clean' or can be damaged by water should not be stored in this location. This would include items such as:

- a. Pater products
- b. Toilet tissue
- c. Medical supplies (towels, gowns, gloves, etc.)
- d. Books
- e. Soap (powdered or bar soap in cardboard boxes/paper wrappers)
- f. Patient care items
- g. Anything that holds water and can harbor mold

Examples of improper under-sink storage are below – see photos.
