

Active Screening of Residents

Evaluate residents for the following every 12 hours

Common Signs and Symptoms

Fever $\geq 37.8^{\circ}\text{C}$ (100.0°F)

Cough

Shortness of breath

Less Common Signs and Symptoms

Confusion or change in mental status. *If noted, check pulse oximetry to determine if increased oxygen requirements*

Muscle aches, headache

Sore throat, runny nose

Chest pain

Diarrhea, nausea and vomiting

Probable case: any two of the common signs/symptoms

Initiate contact and droplet precautions

Check a room air pulse-oximetry

Increase frequency of vital signs, including pulse oximetry to every 8 hours

*Screen for influenza. **If negative, screen for COVID-19***

Possible case: any one of the common signs/symptoms and ≥ 1 of the less common signs/symptoms

Initiate contact and droplet precautions

Check a room air pulse-oximetry

Increase frequency of vital signs, including pulse oximetry to every 8 hours
